TWO

# ALUMINE TWO

## Sounds so much bigger than it looks

Stenheim loves music passionately. At the heart of our design philosophy is a belief in thin-walled aluminium billet for cabinet enclosures that maximises all-important internal space for modest external dimensions, creating speakers that sound bigger than they look. These state-of-the-art cabinets are combined with high-efficiency, cellulose-based drivers for speed and dynamics that render every nuance of the musicians' expression.

Despite being the smallest speaker in Stenheim's range, the Alumine Two delivers performance with surprising scale and musical authority. Defying the norm, these are compact speakers with a difference: a difference that is rooted in a combination of musical sensitivity and the Swiss atelier tradition.

Compared to other speakers, the Alumine Two is genuinely bigger than it looks. The use of a thin-wall, machined aluminium cabinet enables us to use a bigger than expected bass-mid driver. This, in combination with sophisticated, low-volume damping materials, allows for higher system efficiency that delivers effortless dynamics and instrumental or vocal nuance – the lifeblood of musical expression.

As always at Stenheim, we use traditional, coated cellulose and fabric drivers to preserve harmonics and tonality, combined through a phase coherent, light-touch hybrid crossover to maintain the critical timing and spatial information that brings the original event to life. The lessons of the past meet the materials and technologies of the future in a perfect functional synthesis, arrived at after long hours of attentive listening during the development phase.

Hand-built in Switzerland with extraordinary attention to detail, every Alumine Two will deliver the same exceptional, musical performance every time for years to come. Available in its standard version, or as a Special Edition with enhanced internal wiring, crossover components and Reference binding posts for the most demanding systems, the Alumine Two ignores conventional performance limitations just as it ignores marketing diktats and audio fads – because quality and performance never go out of fashion.

More than meets the eye, more music for your ears.

## TECHNICAL SPECIFICATIONS

- Passive 2-way bookshelf speaker
- 1x 16.6cm (6.5") woofer, 1x 2.6cm (1") soft dome tweeter
- Front bass reflex design
- Full aluminium construction
- Phase coherent crossover employing high grade, audiophile components
- Frequency response: 45Hz to 30kHz
- Sensitivity: 93dB SPL, half space
- Power handling: 100W RMS, 200W Peak
- Minimum recommended power: 5W
- Nominal impedance: 8 Ohms (minimum 6 Ohms)
- Dimensions: Height 33cm (13") x Width 23cm (9") x Depth 27.5cm (10.8")
- Weight: 17kg (37.5lbs) each
- Available in metallic Light Grey or Dark Grey with black front and rear
- Warranty: 5 years

## Custom options

- Full Black, Ivory or Mocca with black front and rear
- Special Edition SE available with upgraded, ultimate components (crossover, internal wiring and binding posts)
- Classic stand in round-section steel or Premium stand in rectangular aluminium

Your music, live
